DETAILED ACTION

Allowable Subject Matter

Claims 1, 4, 6, 10-27, 29 and 31-33 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Re claims 1, 4, 6, 10-13, 16-27, 29 and 31, the prior art fails to teach or suggest, "A method for automatically framing and tracking an object of interest using a video camera integrated into hand-held processing devices including PDAs, mobile telephones, palmtops, and portable computers to insure stability of the image content as a user manipulates the device, the method comprising the steps of: providing said video camera with a wide field of view; continuously detecting relative movement associated with the hand-held device that tracks the object of interest within a displayed image generated by said camera, the relative movement depending on the tracking of the object of interest; and **continuously electronically adjusting the camera, without the use of a motor, in response to the detected relative movement, so as to maintain a desired framing and tracking of the object of interest within an image and/or successive images, as long as the image or images remain in the field of view generated by the camera for selectively providing either one of a still picture of**

Art Unit: 2622

the object or video image of the object, respectively, for providing a stable image in the presence of movement of a user's hand holding said device; wherein the framing of the object involves creating a model of the object; and wherein the model is adjusted based on a history of prior obtained plurality of calibration parameters used to represent one or more matrices used for the framing and tracking of the object".

Re claims 14 and 32, the prior art fails to teach or suggest, "An apparatus for automatically framing and tracking an object of interest, the apparatus comprising: a hand-held processing device including PDA's, mobile telephones, palmtops, and portable computers, having at least one video camera integrated therein, the hand-held device further comprising: a processor operative to continuously monitor the detection of relative movement associated with the hand-held device that tracks the object of interest, due to movement of a user's hand holding said device, the relative movement depending on the tracking of the object of interest, **said processor being responsive to the detected relative movement for continuously solely electronically adjusting, without use of a motor, at least one setting of the camera so as to continuously maintain a desired framing of the object of interest within an image generated by the camera as a user manipulates the device, for providing a stable image; wherein the framing of the object involves creating a model of the object; and wherein the model is adjusted based on a history of prior obtained plurality**

Art Unit: 2622

of calibration parameters used to represent one or more matrices used for the framing and tracking of the object”.

Re claims 15 and 33, the prior art fails to teach or suggest, “An article of manufacture comprising a storage medium for storing one or more programs for tracking an object of interest using at least one video camera having integrated into a hand-held processing device, including PDA's, mobile telephones, palmtops, and portable computers, wherein the one or more programs when executed by a processor implement the steps of: detecting relative movement associated with the hand-held device that tracks the object of interest, the relative movement depending on the tracking of the object of interest; and **adjusting solely electronically, without the use of a motor, at least one setting of the camera, in response to the detected relative movement, so as to maintain a desired framing of the object of interest within an image generated by the camera, for providing a stable image; wherein the framing of the object involves creating a model of the object; and wherein the model is adjusted based on a history of prior obtained plurality of calibration parameters used to represent one or more matrices used for the framing and tracking of the object”.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2622

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
